

TV8351

## Outdoor Housing 400 mm

The outdoor housing is an accessory to the cameras of the Profiline series. It does not only provide secure mounting, but also protects your camera against wind and rain.

A 230 VAC heating unit with thermostat is integrated in the weatherproof aluminum housing. Thanks to the heating system, the window of the protective housing cannot fog up and condensation water is prevented. The result: Clear images even in capricious weather. The housing is dust-proof and protected against strong jets of water (IP66). You can mount it outdoors without hesitation. Depending on the camera you can choose between a housing of 36 cm length (TV8350) and one of 40 cm length (TV8351). Use the wall mount (TV8352) for secure installation of the outdoor housing.
